Health Assessment Review for Possible Health Studies: Albion-Sheridan Township Landfill, Albion, Calhoun County, Michigan (50AN)

Chief, Records and Information Management Branch, DHAC (E-32)

Information regarding the Albion-Sheridan Township Landfill, Albion, Calhoun County, Michigan was reviewed by Leslie J. Hutchinson, M.D., on May 22, 1990. Upon the review of this information, we recommend the following statement be included in the site Health Assessment regarding the need for follow-up health studies.

In accordance with CERCLA as amended, the Albion-Sheridan Township Landfill has been evaluated for appropriate follow-up with respect to health effects studies. Although there are indications that human exposure to on-site contaminants is possibly now occurring and has possibly occurred in the past, this site is not being considered for follow-up health studies at this time because no currently available evidence substantiates hypothetically plausible human exposures to toxicants. However, if data become available suggesting that human exposure to significant levels of hazardous substances is currently occurring or has occurred in the past, ATSDR will reevaluate this site for any indicated follow-up.
